About Me

Experienced software engineer with 5+ years building customer-facing, accessibility focused web and mobile applications. Proven track record of driving major product rewrites, architecting scalable solutions, and delivering high-impact cost effective features under fixed deadlines. Deep expertise in React, React Native, and cross-platform performance optimization.

Professional Experience

Frontend / Mobile App Developer, EG Healthcare (Patientsky) 05/2024 – Present

- Led the full rewrite of the Patientsky patient app using React Native, delivering features like authentication, practitioner search, appointment booking, practitioner chat, user impersonation, and push notifications within a short timeline.
- Worked on an AI transcription module for practitioners using Speechmatics to generate live transcripts and convert them into editable SOAP notes.
- Built real-time transcription workflows that helped practitioners quickly review, edit, and submit clinical notes during consultations.
- Handled several complex mobile edge cases across both iOS and Android including background recording, app foreground persistence, reconnect handling, interruptions during calls, and audio/haptic feedback for connection state changes.
- Implemented shared models and reusable services across mobile and web platforms, helping improve development speed and reduce duplicate logic.
- Improved accessibility (WCAG) compliance and app performance while simplifying booking and onboarding flows for patients.
- Successfully launched the application on App Store, Play Store, and Web with improved usability and reduced friction in booking workflows.

Cloud Associate, Niveus Solutions (ICICI CSP & Products) 09/2022 – 05/2024

- Led development of customer service portal, 3-in-1 account conversion, and Mortgage Dashboard for ICICI, delivering production-ready products with minimal defects.
- Researched micro frontend solutions, configured webpack and nginx for FlutterFlow integration, and built mock backend to enable continuous development.
- Mentored junior developers through code reviews and best practices, while managing client calls and supporting cross-functional teams with technical queries.
- Resolved critical issues including CSR bugs, Docker vulnerabilities, and system downtimes; created comprehensive documentation and earned Google Cloud Architect certification.

Systems Engineer, Infosys (React Developer) 05/2021 – 09/2022

- Built web application for ground crew and fleet management operations planning based on runway restrictions, designing and developing the entire frontend UI from scratch with full CRUD functionality.
- Implemented comprehensive user authentication system with role-based access control, along with advanced search and filter capabilities across multiple data columns.
- Developed data comparison features using multiple tables and integrated pagination and infinite scroll support to handle large datasets upto 1M records efficiently.
- Ensured application quality through manual UI defect testing, bug fixes, workarounds, and unit testing using React Testing Library.

Full Stack Developer, Nexus.io (Nexus Blockchain Explorer) 2020 – 2021

- Developed web application to explore the Nexus blockchain, including complete Figma design and frontend implementation using React and SASS stylesheets.
- Integrated Apexcharts for data visualization, enhancing chart display capabilities by 20%.
- Built Python Flask backend as a cache provider, reducing API hits by 30% and routing calls through HTTPS proxy middleware.
- Implemented AppContext with custom hooks for persistent user settings and conducted manual testing with defect fixes.

Projects

Kamavo, Full Stack Mobile Developer, Kamavo 04/2026 – Present

- Built Kamavo, a mobile platform connecting workers, contractors, and suppliers for construction and blue-collar job opportunities.
- Designed the worker onboarding flow to be extremely simple and easy to use, even for users with limited literacy or smartphone experience.
- Added multilingual audio guidance for UI elements in 4 languages along with voice input support for users who are not comfortable typing.
- Developed support for 3 different user roles within the same platform: workers, contractors, and suppliers, each with separate workflows and dashboards.
- Implemented location-aware job discovery that prioritizes relevant nearby jobs based on worker location and job matching.
- Built an admin panel for the operations team to manage users, jobs, and contractor credit top-ups used for posting jobs on the platform.
- Used Expo Web to reuse the same React Native codebase across Android and Web, reducing development time and keeping features consistent across platforms.
- Focused heavily on accessibility, usability, and real-world user behavior while building for blue-collar workers with varying levels of digital familiarity.

Education

B.E in Electronics and Communications, 2016 – 2020
Canara Engineering College

Pre University, Padua PU College, Nantoor 2014 – 2016

SSLC, Navachetana English Medium School 2004 – 2014

Skills

Hard Skills

- Proficient in React
- Agentic development
- Discovering low-cost alternatives
- Complete end-to-end application development
- Effective debugging.

Soft Skills

- Observation
- Decision making
- Communication
- Multi-tasking
- Critical Thinking

Awards and Certifications

Certified Google Cloud Architect

Certified Claude code agentic developer

Technical Expertise

Tech Stack
React Native, Expo, React.js, Next.js, Python, PM2, Oracle Cloud, Google Cloud

Backend
Express.js, Node.js

Database
MySQL, MongoDB, Supabase, Firebase, Appwrite

Devops
Git/GitHub, Docker, Github actions CI/CD
