ABOUT ME

Experienced software engineer with 5+ years building customer-facing, accessibility-focused web and mobile applications. Proven track record of driving major product rewrites, architecting scalable solutions, and delivering high-impact, cost-effective features under fixed deadlines. Deep expertise in React, React Native, TypeScript, state management, and cross-platform performance optimization. Strong experience with REST APIs, GraphQL, cloud technologies, responsiveness, troubleshooting, and scalable mobile development workflows.

TECHNICAL SKILLS

Tech Stack, *Frontend & Mobile*
React.js, React Native, Next.js, TypeScript, JavaScript, HTML, responsive web design, mobile development, UI/UX design, UX design, component libraries

State Management & APIs
Redux, Zustand, state management, REST APIs, GraphQL, WebSockets, web services

Backend
Node.js, Express.js, PostgreSQL, MySQL, MongoDB, Supabase, Firebase, Appwrite

Database
MySQL, MongoDB, Supabase, Firebase, Appwrite

Cloud & Devops
AWS, Google Cloud, Oracle Cloud, cloud computing, cloud technologies, Jenkins, Docker, GitHub Actions CI/CD, caching

Testing & Development Tools
Jest, React Testing Library, automated testing, troubleshooting, Root Cause Analysis, CLI, IDE tooling, version control

Workflow & Practices
Agile, Jira, project management, problem-solving, attention to detail, debugging, Git, Github

SKILLS

Hard Skills (Proficient in React • Agentic development • Discovering low-cost alternatives • Complete end-to-end application development • Effective debugging.) | **Soft Skills** (Observation • Decision making • Communication • Multi-tasking • Critical Thinking)

AWARDS AND CERTIFICATIONS

Certified Google Cloud Architect

Certified Claude code agentic developer

PROFESSIONAL EXPERIENCE

EG Healthcare (Patientsky), *Frontend / Mobile App Developer* 05/2024 – Present

- Led the full rewrite of the Patientsky patient app using React Native, TypeScript, Redux, and reusable component libraries, delivering features like authentication, practitioner search, appointment booking, practitioner chat, user impersonation, and push notifications within a short timeline.
- Worked on an AI transcription module for practitioners using Speechmatics to generate live transcripts and convert them into editable SOAP notes.
- Built real-time transcription workflows using WebSockets and cloud technologies to help practitioners quickly review, edit, and submit clinical notes during consultations.
- Handled several complex mobile edge cases across both iOS and Android including background recording, reconnect handling, interruptions during calls, app persistence, and audio/haptic feedback for connection state changes.
- Implemented shared models, reusable services, and state management patterns across mobile and web platforms, improving development speed and reducing duplicate logic.
- Improved accessibility (WCAG), responsiveness, UX/UI design, and application performance while simplifying booking and onboarding flows for patients.
- Successfully launched the application on App Store, Play Store, and Web with improved usability and reduced friction in booking workflows.
- Participated in Agile workflows using Jira, version control, project management practices, troubleshooting, and Root Cause Analysis for production issues.
- Added automated testing and unit testing workflows using Jest and React Testing Library.

Niveus Solutions (ICICI CSP & Products), *Cloud Associate* 09/2022 – 05/2024

- Led development of customer service portal, 3-in-1 account conversion, and Mortgage Dashboard for ICICI, delivering production-ready products with minimal defects.
- Worked with AWS, cloud computing platforms, and cloud technologies while contributing to scalable enterprise web services.
- Researched micro frontend solutions, configured webpack and nginx for FlutterFlow integration, and built mock backend services to enable continuous development.
- Mentored junior developers through code reviews, troubleshooting support, and best practices while managing client calls and supporting cross-functional teams with technical queries.
- Resolved critical production issues including CSR bugs, Docker vulnerabilities, and system downtimes through effective Root Cause Analysis and problem-solving.
- Created technical documentation and earned Google Cloud Architect certification.
- Worked with Jenkins pipelines, CLI tooling, version control systems, and Agile project workflows.

Infosys (React Developer), *Systems Engineer* 05/2021 – 09/2022

- Built web application for ground crew and fleet management operations planning based on runway restrictions, designing and developing the complete frontend UI from scratch using React and TypeScript.
- Implemented user authentication systems with role-based access control, advanced search, filtering, and responsive UI/UX design patterns.
- Developed data comparison features using multiple tables and integrated pagination and infinite scroll support to handle datasets up to 1M records efficiently.
- Integrated REST APIs and backend web services while maintaining high responsiveness and performance optimization.
- Ensured application quality through automated testing, manual defect testing, troubleshooting, and unit testing using React Testing Library and Jest.

- Collaborated within Agile teams using Jira, Git version control, IDE tooling, and project management workflows.

Nexus.io (Nexus Blockchain Explorer), *Full Stack Developer* 2020 – 2021

- Developed web application to explore the Nexus blockchain, including complete UX/UI design in Figma and frontend implementation using React and SASS.
- Integrated ApexCharts for data visualization, enhancing chart display capabilities by 20%.
- Built Python Flask backend as a caching provider, reducing API hits by 30% and routing calls through HTTPS proxy middleware.
- Developed REST APIs, reusable services, and persistent application state management using custom hooks and AppContext.
- Conducted troubleshooting, debugging, and manual testing to improve application stability and usability.
- Focused heavily on responsiveness, attention to detail, and frontend performance optimization.

PROJECTS

Kamavo, *Full Stack Mobile Developer, Kamavo* 04/2026 – Present

- Built Kamavo, a cross-platform mobile development platform connecting workers, contractors, and suppliers for construction and blue-collar job opportunities.
- Developed the platform using React Native, TypeScript, PostgreSQL, Supabase, and cloud technologies with shared codebase support across Android and Web.
- Designed the onboarding experience to be extremely simple and accessibility-focused, even for users with limited literacy or smartphone experience.
- Added multilingual audio guidance for UI elements in 4 languages along with voice input support for users who are not comfortable typing.
- Developed support for 3 different user roles within the same platform: workers, contractors, and suppliers, each with separate workflows and dashboards.
- Implemented location-aware job discovery using real-time data, WebSockets, and state management techniques to prioritize nearby jobs based on worker location.
- Built admin panel and management workflows for handling users, jobs, contractor credits, and operational activities.
- Focused heavily on UX design, responsiveness, accessibility, and real-world usability for blue-collar workers with varying levels of digital familiarity.

EDUCATION

Canara Engineering College, *B.E in Electronics and Communications* 2016 – 2020

Padua PU College, Nantoor, *Pre University* 2014 – 2016

Navachetana English Medium School, *SSLC* 2004 – 2014
