PROFESSIONAL SUMMARY

Software Engineer with 5+ years of experience building and shipping production web, mobile, backend and cloud solutions. Strongest in React, React Native and TypeScript, with hands-on experience designing PostgreSQL schemas, building Node.js/Python services and APIs, implementing authentication/authorization and RLS, integrating third-party services, and deploying applications across web, iOS and Android. Experienced in owning products end-to-end, debugging production systems, and translating ambiguous requirements into practical solutions.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, Java, SQL, Linux, Git
- **Frontend & Mobile:** React.js, React Native, Next.js, Expo, Redux, Zustand, HTML/CSS, responsive UI
- **Backend & APIs:** Node.js, Express.js, Python/Flask, REST APIs, GraphQL, WebSockets, webhooks, Serverless
- **Data & Services:** PostgreSQL, MySQL, MongoDB, Supabase, Firebase, Appwrite, RLS, Cloudflare workers
- **Cloud & DevOps:** AWS, Google Cloud, Docker, Nginx, Jenkins, GitHub Actions, Cloudflare, CI/CD
- **Engineering:** Authentication, authorization, background jobs, cron, file uploads, notifications, testing, RCA
- **AI & Developer Tools:** Speechmatics, AI-assisted development with Claude Code and Codex

PROFESSIONAL EXPERIENCE

EG Healthcare (Patientsky), *Software Developer* 05/2024 – 10/2026

- Led a full rewrite of the Patientsky patient application using React Native, TypeScript, Redux and reusable component libraries, shipping authentication, practitioner search, appointment booking, chat, impersonation and push notifications.
- Worked on an AI transcription workflow using Speechmatics, including live transcription and conversion into editable SOAP notes for practitioners.
- Built real-time transcription workflows using WebSockets and handled difficult iOS/Android edge cases including background recording, reconnects, call interruptions, persistence and audio/haptic connection feedback.
- Implemented shared models, services and state-management patterns across mobile and web, reducing duplicate logic and accelerating feature development.
- Launched the application across App Store, Google Play and Web; the product has 1M+ downloads and approximately 10–20K daily active users.
- Improved accessibility, responsive UX and performance, and contributed automated/unit testing with Jest and React Testing Library.
- Worked with Java backend code for private template/journal functionality and collaborated on production troubleshooting and root-cause analysis.

Niveus Solutions (ICICI CSP & Products), *Cloud Associate* 09/2022 – 05/2024

- Led development of an ICICI customer service portal, 3-in-1 account conversion flow and Mortgage Dashboard, delivering production-ready enterprise applications.
- Worked with AWS and enterprise cloud services while contributing to scalable web applications and integrations.
- Researched micro-frontend approaches, configured Webpack and Nginx for FlutterFlow integration, and built mock backend services to unblock continuous frontend development.
- Resolved critical production issues involving CSR bugs, Docker vulnerabilities and system downtime through structured root-cause analysis.
- Built Node.js scripts for testing and automation, and worked with Jenkins pipelines, CLI tooling, Git and Agile delivery workflows.
- Mentored junior developers through code reviews and troubleshooting, and handled technical discussions with clients and cross-functional teams.

Infosys, *Systems Engineer / React Developer* 05/2021 – 09/2022

- Built the frontend of a ground-crew and fleet-management planning application from scratch using React and TypeScript.
- Implemented authentication, role-based access control, advanced search/filtering and responsive UI workflows.
- Built data-comparison interfaces capable of efficiently handling datasets of up to 1M records using pagination and infinite scrolling.

- Integrated REST APIs and backend web services while optimizing application responsiveness and performance.
- Implemented automated and unit testing with Jest and React Testing Library and supported production troubleshooting.

Nexus.io, *Full-Stack Developer* 2020 – 2021

- Built a web-based Nexus blockchain explorer using React and SASS, including UX/UI design in Figma and production frontend implementation.
- Built a Python Flask caching backend and HTTPS proxy middleware, reducing upstream API hits by approximately 30%.
- Developed REST APIs, reusable services and persistent client-side state using custom React hooks and AppContext.
- Integrated ApexCharts and built data visualizations while improving application responsiveness and stability.

PERSONAL PROJECTS

Kamavo, *Full-Stack Mobile Platform* 04/2026 – Present

- Built a cross-platform platform connecting workers, contractors and suppliers, supporting Android, iOS and Web.
- Owned both application and backend implementation using React Native, TypeScript, PostgreSQL and Supabase, including database schemas/tables, Edge Functions, authentication, authorization and Row Level Security (RLS).
- Implemented file/image uploads, notifications, cron/background jobs, real-time location-aware job discovery and role-specific workflows for three user types.
- Built admin and operational workflows for users, jobs and contractor credits; the platform is being developed for a target user base of approximately 10K users.
- Owned production deployment workflows across Android, iOS and Web.

Showzio: A Multi-Tenant Movie Ticketing Platform 01/2026 – Present

Full stack product built with Next.js and Supabase

- Architected and built a multi-tenant ticketing platform for film producers and organizers to manage movies, shows, bookings, payments, and ticket operations from a shared application.
- Implemented tenant isolation using Supabase Row Level Security, server-side authorization, organizer-specific booking pages, and role-based access control.
- Built the public booking flow end-to-end with Next.js App Router, including movie pages, show/seat selection, payment, and digital ticket delivery.
- Integrated configurable Razorpay, PhonePe, and manual QR payments, including transaction verification and re-verification workflows.
- Engineered automatic-expiry seat locking to prevent double-booking without real-time infrastructure, along with signed QR ticket validation for low-connectivity venues.

Deftly, *Full-Stack Product | Independent Product*

- Built the product end-to-end across frontend, backend, admin tooling and deployment, using Expo, Supabase and cloud services.
- Implemented authentication, backend workflows, admin operations and Cloudflare OTP Worker integration.
- Managed website SEO and hosting for app.deftly.in, including Android, iOS and Web deployments; product is currently in open beta.

Automation & Telegram Bots, *Independent Projects*

- Built multiple production-oriented Telegram bots, including rr.bot for Internet Service Provider monitoring with downtime/degradation alerts.
- Built an intuitive WhatsApp-based ticketing bot that allows users to create and edit support tickets directly from WhatsApp, simplifying ticket management without leaving the messaging platform.
- Built a music-splitting bot using the Spleeter library and a bill-generation bot using Python PDF tooling.
- Designed the services around external APIs, automation workflows, background processing and deployment requirements.

EDUCATION & CERTIFICATIONS

B.E. in Electronics and Communications Engineering, *Canara Engineering College* 2016 – 2020

Google Cloud Architect

Claude Code Agentic Developer
